Renewable Energy: Sources and Methods (Green Technology) Anne E. Maczulak

It is difficult to identify a defining moment that turned the tide toward less-polluting energy sources, but most people today have a fresh outlook on the environment and realize the importance of conservation. In recent years, a new community of people who want alternative energies for their cars, public vehicles, and houses has emerged. "Renewable Energy" reviews the current status of technologies in renewable energy, a critical subject since the world now increases its energy consumption between 1 to 3 percent each year. Covering the current rate of energy consumption and the consequences of continuing this rate, this new book explains how the main conventional forms of energy - including coal, oil, and gas - contribute to economies. The focus of this full-color book is the remarkable diversity of ideas that are born every day in the field of alternative energy. The chapters include: Earth's Energy Sources; Recycling; Gasoline Alternative Vehicles; Biorefineries; Innovations in Clean Energy; Green Building Design; and, Energy from Solid Biomass.
