Latchup

Steven H. Voldman

Latchup Steven H. Voldman

Interest in latchup is being renewed with the evolution of complimentary metal-oxide semiconductor (CMOS) technology, metal-oxide-semiconductor field-effect transistor (MOSFET) scaling, and high-level system-on-chip (SOC) integration.

Clear methodologies that grant protection from latchup, with insight into the physics, technology and circuit issues involved, are in increasing demand.

This book describes CMOS and BiCMOS semiconductor technology and their sensitivity to present day latchup phenomena, from basic over-voltage and over-current conditions, single event latchup (SEL) and cable discharge events (CDE), to latchup domino phenomena. It contains chapters focusing on bipolar physics, latchup theory, latchup and guard ring characterization structures, characterization testing, product level test systems, product level testing and experimental results. Discussions on state-of-the-art semiconductor processes, design layout, and circuit level and system level latchup solutions are also included, as well as:

- latchup semiconductor process solutions for both CMOS to BiCMOS, such as shallow trench, deep trench, retrograde wells, connecting implants, sub-collectors, heavily-doped buried layers, and buried grids – from single- to triple-well CMOS;
- practical latchup design methods, automated and bench-level latchup testing methods and techniques, latchup theory of logarithm resistance space, generalized alpha (a) space, beta (b) space, new latchup design methods– connecting the theoretical to the practical analysis, and;
- examples of latchup computer aided design (CAD) methodologies, from design rule checking (DRC) and logical-to-physical design, to new latchup CAD methodologies that address latchup for internal and external latchup on a local as well as global design level.

Latchup acts as a companion text to the author's series of books on ESD (electrostatic discharge) protection, serving as an invaluable reference for the professional semiconductor chip and system-level ESD engineer. Semiconductor device, process and circuit designers, and quality, reliability and failure analysis engineers will find it informative on the issues that confront modern CMOS technology. Practitioners in the automotive and aerospace industries will also find it useful. In addition, its academic treatment will appeal to both senior and graduate students with interests in semiconductor process, device physics, computer aided design and design integration.

From reader reviews:

Robert Glass:

Do you have favorite book? If you have, what is your favorite's book? Publication is very important thing for us to understand everything in the world. Each book has different aim or maybe goal; it means that reserve has different type. Some people truly feel enjoy to spend their time and energy to read a book. These are reading whatever they consider because their hobby is reading a book. What about the person who don't like looking at a book? Sometime, man feel need book when they found difficult problem or exercise. Well, probably you will want this Latchup.

Mark Clark:

Nowadays reading books become more and more than want or need but also get a life style. This reading addiction give you lot of advantages. The benefits you got of course the knowledge your information inside the book that improve your knowledge and information. The knowledge you get based on what kind of e-book you read, if you want drive more knowledge just go with training books but if you want feel happy read one using theme for entertaining for example comic or novel. Typically the Latchup is kind of guide which is giving the reader erratic experience.

Terrance Oneal:

Information is provisions for individuals to get better life, information presently can get by anyone with everywhere. The information can be a information or any news even restricted. What people must be consider any time those information which is in the former life are hard to be find than now is taking seriously which one would work to believe or which one the particular resource are convinced. If you receive the unstable resource then you get it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Latchup as the daily resource information.

Paul Dubose:

Don't be worry if you are afraid that this book will filled the space in your house, you may have it in e-book method, more simple and reachable. This Latchup can give you a lot of friends because by you considering this one book you have factor that they don't and make you actually more like an interesting person. This kind of book can be one of a step for you to get success. This reserve offer you information that probably your friend doesn't know, by knowing more than other make you to be great folks. So , why hesitate? Let me have Latchup.
