Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T)

John N. Hatzopoulos

Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) John N. Hatzopoulos

This book is addressed to students and professionals and it is aimed to cover as much as possible the wider region of topographic mapping as it has been evolved into a modern field called geospatial information science and technology. More emphasis is given to the use of scientific methods and tools that are materialised in algorithms and software and produce practical results. For this reason beyond the written material there are also many educational and professional software programs written by the author to comprehend the individual methodologies which are developed. Target of this book is to provide the people who work in fields of applications of topographic mapping (environment, geology, geography, cartography, engineering, geotechnical, agriculture, forestry, etc.) a source of knowledge for the wider region so that to help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to professionals and evaluating such contracting results. It is also aimed to be a reference of theory and practice for the professionals in Topographic Mapping. This book applies a didactics method where with a relatively small effort someone can digest a quite large volume of simple or complicated material of knowledge at a desirable scientific depth within a relative short time interval. The objective that educated people must be "smarter than the machine" and not to treat the machine as a "black box" being "button pushers" has been achieved, through the author's experience in USA and Greece, with relative success by adopting this didactics technique. There are 11 chapters and two Appendices including: Reference systems and Projections, Topographic instruments and Geometry of coordinates, Conventional construction of a topographic map, Design and reproduction of a thematic map, Digital Topographic mapping - GIS, Digital Terrain Models (DTM / DEM), GPS, methods of Photogrammetry, Remote Sensing, new technologies LIDAR, IFSAR, the method of Least Squares adjustment, Description of educational software accompanying the text.

From reader reviews:

David Hernandez:

Information is provisions for people to get better life, information these days can get by anyone with everywhere. The information can be a information or any news even restricted. What people must be consider when those information which is inside former life are difficult to be find than now's taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you find the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All of those possibilities will not happen with you if you take Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) as the daily resource information.

Maurice Neely:

In this period globalization it is important to someone to get information. The information will make professionals understand the condition of the world. The health of the world makes the information quicker to share. You can find a lot of personal references to get information example: internet, paper, book, and soon. You will see that now, a lot of publisher that print many kinds of book. The book that recommended to you personally is Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) this publication consist a lot of the information in the condition of this world now. This particular book was represented how do the world has grown up. The language styles that writer use to explain it is easy to understand. Typically the writer made some study when he makes this book. This is why this book appropriate all of you.

Scott Burnett:

Many people spending their period by playing outside together with friends, fun activity with family or just watching TV all day long. You can have new activity to pay your whole day by reading a book. Ugh, think reading a book can definitely hard because you have to take the book everywhere? It ok you can have the e-book, getting everywhere you want in your Cell phone. Like Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) which is finding the e-book version. So , why not try out this book? Let's find.

Malcolm Moser:

You can find this Topographic Mapping: Covering the Wider Field of Geospatial Information Science & Technology (GIS&T) by check out the bookstore or Mall. Just viewing or reviewing it might to be your solve challenge if you get difficulties for the knowledge. Kinds of this publication are various. Not only by written or printed but in addition can you enjoy this book by e-book. In the modern era just like now, you just looking because of your mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your publication. It is most important to arrange you to ultimately make your knowledge are still revise. Let's try to choose suitable ways for you.
