Helium Cryogenics (International Cryogenics Monograph Series)

Steven W. Van Sciver

Helium Cryogenics (International Cryogenics Monograph Series) Steven W. Van Sciver

Twenty five years have elapsed since the original publication of *Helium Cryogenics*. During this time, a considerable amount of research and development involving helium fluids has been carried out culminating in several large-scale projects. Furthermore, the field has matured through these efforts so that there is now a broad engineering base to assist the development of future projects.

Helium Cryogenics, 2nd edition brings these advances in helium cryogenics together in an updated form. As in the original edition, the author's approach is to survey the field of cryogenics with emphasis on helium fluids. This approach is more specialized and fundamental than that contained in other cryogenics books, which treat the associated range of cryogenic fluids. As a result, the level of treatment is more advanced and assumes a certain knowledge of fundamental engineering and physics principles, including some quantum mechanics.

The goal throughout the work is to bridge the gap between the physics and engineering aspects of helium fluids to provide a source for engineers and scientists to enhance their usefulness in low-temperature systems.

Dr. Van Sciver is a Distinguished Research Professor and John H. Gorrie Professor of Mechanical Engineering at Florida State University. He is also a Program Director at the National High Magnetic Field Laboratory (NHMFL). Dr. Van Sciver joined the FAMU-FSU College of Engineering and the NHMFL in 1991, initiating and teaching a graduate program in magnet and materials engineering and in cryogenic thermal sciences and heat transfer. He also led the NHMFL development efforts of the cryogenic systems for the NHMFL Hybrid and 900 MHz NMR superconducting magnets. Between 1997 and 2003, he served as Director of Magnet Science and Technology at the NHMFL. Dr. Van Sciver is a Fellow of the ASME and the Cryogenic Society of America and American Editor for the journal *Cryogenics*. He is the 2010 recipient of the Kurt Mendelssohn Award.

Prior to joining Florida State University, Dr. Van Sciver was Research Scientist and then Professor of Nuclear Engineering, Engineering Physics and Mechanical Engineering at the University of Wisconsin-Madison from 1976 to 1991. During that time he also served as the Associate Director of the Applied Superconductivity Center. Dr. Van Sciver received his PhD in Low Temperature Physics from the University of Washington-Seattle in 1976. He received his BS degree in Engineering Physics from Lehigh University in 1970.

Dr. Van Sciver is author of over 200 publications and patents in low temperature physics, liquid helium technology, cryogenic engineering and magnet technology. The first edition of *Helium Cryogenics* was published by Plenum Press (1986). The present work is an update and expansion of that original project.

From reader reviews:

Ebony Thornton:

What do you think of book? It is just for students because they are still students or the item for all people in the world, what best subject for that? Merely you can be answered for that issue above. Every person has various personality and hobby per other. Don't to be pressured someone or something that they don't need do that. You must know how great and also important the book Helium Cryogenics (International Cryogenics Monograph Series). All type of book can you see on many methods. You can look for the internet options or other social media.

Irma Tijerina:

Your reading 6th sense will not betray anyone, why because this Helium Cryogenics (International Cryogenics Monograph Series) guide written by well-known writer who really knows well how to make book which might be understand by anyone who read the book. Written throughout good manner for you, dripping every ideas and writing skill only for eliminate your own personal hunger then you still doubt Helium Cryogenics (International Cryogenics Monograph Series) as good book but not only by the cover but also from the content. This is one book that can break don't evaluate book by its cover, so do you still needing a different sixth sense to pick this kind of!? Oh come on your reading sixth sense already alerted you so why you have to listening to a different sixth sense.

Marlene Clabaugh:

Reading a book for being new life style in this 12 months; every people loves to read a book. When you study a book you can get a large amount of benefit. When you read books, you can improve your knowledge, because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you need to get information about your study, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, these us novel, comics, as well as soon. The Helium Cryogenics (International Cryogenics Monograph Series) provide you with a new experience in reading through a book.

Cheri Tow:

You may spend your free time to see this book this e-book. This Helium Cryogenics (International Cryogenics Monograph Series) is simple to bring you can read it in the area, in the beach, train in addition to soon. If you did not include much space to bring the actual printed book, you can buy the actual e-book. It is make you quicker to read it. You can save the particular book in your smart phone. So there are a lot of benefits that you will get when one buys this book.
