Adhesion to Fluoropolymers: Rapra Review Report 183 (Rapra Review Reports) Ralf H. Dahm, Derek M. Brewis

Fluorinated polymers have a number of very useful properties such as excellent chemical resistance. However, they are usually difficult to bond without a pretreatment. There are exceptions and untreated poly(vinylidene fluoride), for example, may be successfully bonded with an amine-cured epoxide. The most effective methods to pretreat fully fluorinated polymers were developed in the 1950s. Much work, especially on electrochemical and plasma treatments, has since been carried out but to date these have not proved as effective as the early methods. Partially fluorinated polymers may be treated like polyolefins, for example, flame, and plasma treatments are very effective. Aqueous and alcoholic solutions of Group I hydroxides are also very effective. Fluoropolymers can provide a combination of properties including high temperature resistance, excellent resistance to many chemicals and ultraviolet (UV) radiation, fire resistance and low friction. Fluoropolymers are relatively expensive and they are generally used in specialised applications such as linings for chemical plant, spacecraft coatings that are resistant to atomic oxygen, fire-resistant coatings for cables, and of course, non-stick functions. There are more than twenty different fluoropolymers that are commercially available. Good adhesion is required in a number of technologies involving fluoropolymers including adhesive bonding, painting, printing, metallisation (via vacuum or solution) and composite production. However, fully fluorinated polymers such as PTFE and FEP are notoriously difficult to adhere to, while partially fluorinated polymers such as PVDF and PVF may cause problems depending on the circumstances. To achieve a satisfactory level of adhesion, it is often necessary to carry out a pretreatment with both fully and partially fluorinated polymers. In this review the principles of adhesion are considered first (Section 2). Techniques that have greatly increased our understanding of adhesion to fluoropolymers are described in Section 3. Cases where good adhesion is achieved without a pretreatment are examined in Section 4. However, as pretreatments are usually needed to get the required level of adhesion, this review is mainly concerned with the wide variety of methods available to pretreat fluoropolymers (Section 5). A general discussion and conclusions follow. This Rapra Review Report comprises a concise, expert review, supported by an extensive bibliography compiled from the Polymer Library on the topic of adhesion to fluoropolymers. This bibliography provides additional information on this topical field. This review will be of interest both to those who already use fluoropolymers and those who are considering using them.

From reader reviews:

Kevin Nixon:

Now a day people that Living in the era wherever everything reachable by match the internet and the resources in it can be true or not require people to be aware of each info they get. How a lot more to be smart in acquiring any information nowadays? Of course the reply is reading a book. Reading through a book can help people out of this uncertainty Information especially this Adhesion to Fluoropolymers: Rapra Review Report 183 (Rapra Review Reports) book as this book offers you rich info and knowledge. Of course the info in this book hundred pct guarantees there is no doubt in it everbody knows.

Christine Andrews:

Reading a book to become new life style in this calendar year; every people loves to learn a book. When you examine a book you can get a lot of benefit. When you read books, you can improve your knowledge, since book has a lot of information onto it. The information that you will get depend on what sorts of book that you have read. If you would like get information about your examine, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this kind of us novel, comics, and soon. The Adhesion to Fluoropolymers: Rapra Review Report 183 (Rapra Review Reports) offer you a new experience in reading a book.

Alan Robert:

As we know that book is important thing to add our know-how for everything. By a reserve we can know everything we wish. A book is a pair of written, printed, illustrated or perhaps blank sheet. Every year has been exactly added. This reserve Adhesion to Fluoropolymers: Rapra Review Report 183 (Rapra Review Reports) was filled about science. Spend your extra time to add your knowledge about your scientific disciplines competence. Some people has diverse feel when they reading any book. If you know how big advantage of a book, you can truly feel enjoy to read a guide. In the modern era like right now, many ways to get book that you just wanted.

Janie Williams:

Reading a publication make you to get more knowledge as a result. You can take knowledge and information from your book. Book is created or printed or illustrated from each source this filled update of news. Within this modern era like currently, many ways to get information are available for a person. From media social like newspaper, magazines, science publication, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Do you want to spend your spare time to open your book? Or just seeking the Adhesion to Fluoropolymers: Rapra Review Report 183 (Rapra Review Reports) when you necessary it?
