Comparative Climatology of Terrestrial Planets (Space Science Series)

Comparative Climatology of Terrestrial Planets (Space Science Series)

The early development of life, a fundamental question for humankind, requires the presence of a suitable planetary climate. Our understanding of how habitable planets come to be begins with the worlds closest to home. Venus, Earth, and Mars differ only modestly in their mass and distance from the Sun, yet their current climates could scarcely be more divergent. Only Earth has abundant liquid water, Venus has a runaway greenhouse, and evidence for life-supporting conditions on Mars points to a bygone era. In addition, an Earth-like hydrologic cycle has been revealed in a surprising place: Saturn's cloud-covered satellite Titan has liquid hydrocarbon rain, lakes, and river networks.

Deducing the initial conditions for these diverse worlds and unraveling how and why they diverged to their current climates is a challenge at the forefront of planetary science. Through the contributions of more than sixty leading experts in the field, *Comparative Climatology of Terrestrial Planets* sets forth the foundations for this emerging new science and brings the reader to the forefront of our current understanding of atmospheric formation and climate evolution. Particular emphasis is given to surface-atmosphere interactions, evolving stellar flux, mantle processes, photochemistry, and interactions with the interplanetary environment, all of which influence the climatology of terrestrial planets. From this cornerstone, both current professionals and most especially new students are brought to the threshold, enabling the next generation of new advances in our own solar system and beyond.

Contents

Part I: Foundations

Jim Hansen

Mark Bullock

Scot Rafkin

Caitlin Griffith

Shawn Domagal-Goldman and Antígona Segura

Kevin Zahnle

Part II: The Greenhouse Effect and Atmospheric Dynamics

Curt Covey

G. Schubert and J. Mitchell

Tim Dowling

Francois Forget and Sebastien Lebonnois

Vladimir Krasnopolsky

Adam Showman

Part III: Clouds, Hazes, and Precipitation

Larry Esposito

A. Määttänen, K. Pérot, F. Montmessin, and A. Hauchecorne

Nilton Renno

Zibi Turtle

Mark Marley

Part IV: Surface-Atmosphere Interactions

Colin Goldblatt

Teresa Segura et al.

John Grotzinger

Adrian Lenardic

D. A. Brain, F. Leblanc, J. G. Luhmann, T. E. Moore, and F. Tian

Part V: Solar Influences on Planetary Climate

Aaron Zent

Jerry Harder

F. Tian, E. Chassefiere, F. Leblanc, and D. Brain

David Des Marais

From reader reviews:

Geraldine Davis:

Here thing why that Comparative Climatology of Terrestrial Planets (Space Science Series) are different and trustworthy to be yours. First of all reading through a book is good nevertheless it depends in the content than it which is the content is as yummy as food or not. Comparative Climatology of Terrestrial Planets (Space Science Series) giving you information deeper and in different ways, you can find any book out there but there is no e-book that similar with Comparative Climatology of Terrestrial Planets (Space Science Series). It gives you thrill studying journey, its open up your own personal eyes about the thing which happened in the world which is maybe can be happened around you. It is possible to bring everywhere like in recreation area, café, or even in your method home by train. If you are having difficulties in bringing the printed book maybe the form of Comparative Climatology of Terrestrial Planets (Space Science Series) in e-book can be your alternate.

Jeremy Gable:

The book Comparative Climatology of Terrestrial Planets (Space Science Series) will bring that you the new experience of reading the book. The author style to explain the idea is very unique. In the event you try to find new book to learn, this book very suited to you. The book Comparative Climatology of Terrestrial Planets (Space Science Series) is much recommended to you to study. You can also get the e-book in the official web site, so you can quicker to read the book.

Cheryl Fisher:

Reading can called imagination hangout, why? Because if you are reading a book specially book entitled Comparative Climatology of Terrestrial Planets (Space Science Series) your brain will drift away trough every dimension, wandering in each and every aspect that maybe unknown for but surely might be your mind friends. Imaging each word written in a e-book then become one type conclusion and explanation that maybe you never get previous to. The Comparative Climatology of Terrestrial Planets (Space Science Series) giving you yet another experience more than blown away your mind but also giving you useful facts for your better life on this era. So now let us teach you the relaxing pattern this is your body and mind will probably be pleased when you are finished studying it, like winning a. Do you want to try this extraordinary wasting spare time activity?

Harold Bunch:

Don't be worry for anyone who is afraid that this book will filled the space in your house, you may have it in e-book way, more simple and reachable. This particular Comparative Climatology of Terrestrial Planets (Space Science Series) can give you a lot of good friends because by you investigating this one book you have matter that they don't and make you more like an interesting person. This particular book can be one of one step for you to get success. This e-book offer you information that probably your friend doesn't

understand, by knowing more than other make you to be great men and women. So , why hesitate? Let us have Comparative Climatology of Terrestrial Planets (Space Science Series).
