Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy)

Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy)

Renewable Heating and Cooling: Technologies and Applications presents the latest information on the generation of heat for industry and domestic purposes, an area where a significant proportion of total energy is consumed. In Europe, this figure is estimated to be almost 50%, with the majority of heat generated by the consumption of fossil fuels. As there is a pressing need to increase the uptake of renewable heating and cooling (RHC) to reduce greenhouse gas emissions, this book provides a comprehensive and authoritative overview on the topic.

Part One introduces key RHC technologies and discusses RHC in the context of global heating and cooling demand, featuring chapters on solar thermal process heat generation, deep geothermal energy, and solar cooling technologies. Part Two explores enabling technologies, special applications, and case studies with detailed coverage of thermal energy storage, hybrid systems, and renewable heating for RHC, along with case studies in China and Sweden.

Users will find this book to be an essential resource for lead engineers and engineering consultants working on renewable heating and cooling in engineering companies, as well as academics and R&D professionals in private research institutes who have a particular interest in the subject matter.

- Includes coverage on biomass, solar thermal, and geothermal renewable heating and cooling technologies
- Features chapters on solar thermal process heat generation, deep geothermal energy, solar cooling technologies, and special applications
- Presents case studies with detailed coverage of thermal energy storage, hybrid systems, and renewable heating for RHC
- Explores enabling technologies and special applications

From reader reviews:

Elizabeth Cao:

As people who live in often the modest era should be revise about what going on or facts even knowledge to make them keep up with the era that is always change and progress. Some of you maybe may update themselves by reading through books. It is a good choice to suit your needs but the problems coming to an individual is you don't know which one you should start with. This Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy) is our recommendation to help you keep up with the world. Why, since this book serves what you want and want in this era.

Wendy Miller:

Information is provisions for individuals to get better life, information nowadays can get by anyone with everywhere. The information can be a know-how or any news even a huge concern. What people must be consider whenever those information which is inside the former life are challenging to be find than now could be taking seriously which one is appropriate to believe or which one the resource are convinced. If you get the unstable resource then you have it as your main information you will see huge disadvantage for you. All those possibilities will not happen inside you if you take Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy) as the daily resource information.

Holly Hughes:

Are you kind of stressful person, only have 10 or maybe 15 minute in your moment to upgrading your mind skill or thinking skill also analytical thinking? Then you are experiencing problem with the book in comparison with can satisfy your short period of time to read it because all this time you only find e-book that need more time to be read. Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy) can be your answer given it can be read by you who have those short extra time problems.

Frank Botelho:

Don't be worry should you be afraid that this book will certainly filled the space in your house, you can have it in e-book means, more simple and reachable. This Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy) can give you a lot of pals because by you taking a look at this one book you have matter that they don't and make you actually more like an interesting person. This specific book can be one of a step for you to get success. This e-book offer you information that probably your friend doesn't realize, by knowing more than additional make you to be great men and women. So , why hesitate? We should have Renewable Heating and Cooling: Technologies and Applications (Woodhead Publishing Series in Energy).
