## **An Enquiry Concerning the Principles of Natural Knowledge (1919) Alfred North Whitehead**

Alfred North Whitehead (1861 – 1947) was an English mathematician and philosopher. He is best known as the defining figure of the philosophical school known as process philosophy, which today has found application to a wide variety of disciplines, including ecology, theology, education, physics, biology, economics, and psychology, among other areas.

In his early career Whitehead wrote primarily on mathematics, logic, and physics. His most notable work in these fields is the three-volume *Principia Mathematica* (1910–13), which he co-wrote with former student Bertrand Russell. *Principia Mathematica* is considered one of the twentieth century's most important works in mathematical logic, and placed 23rd in a list of the top 100 English-language nonfiction books of the twentieth century by Modern Library.

Beginning in the late 1910s and early 1920s, Whitehead gradually turned his attention from mathematics to philosophy of science, and finally to metaphysics. He developed a comprehensive metaphysical system which radically departed from most of western philosophy. Whitehead argued that reality consists of processes rather than material objects, and that processes are best defined by their relations with other processes, thus rejecting the theory that reality is fundamentally constructed by bits of matter that exist independently of one another. Today Whitehead's philosophical works – particularly *Process and Reality* – are regarded as the foundational texts of process philosophy.

The present volume is a philosophical consideration of the traditions and data of science, followed by a detailed development of what the author terms "the method of extensive abstraction," which deals in a generalized and systematic manner with the relations of time and space.

The four parts of the book deal with: The traditions of science, The data of science, The method of extensive abstraction, The theory of objects. In the investigation the scientific concepts of space and time are considered as the first outcome of the simplest generalization from experience.

This is a book of real importance. There are pages filled with definitions of queer technical terms, but that is not what makes it hard reading. The difficulty lies in the thought. You need some mathematical training to read the book, and you need some acquaintance with the previous writings of the author, or the related writings of Mr. Bertrand Russell. But far more than these, you need a sense of the whole movement of modern physical science, and an imagination undaunted by four-dimensional manifolds interweaving with other four-dimensional manifolds. In short, we have a book here which ought to be read by every philosophy student interested in metaphysics or in the philosophy of nature, but a book which most students of philosophy are not competent to read.

The subject of the enquiry is stated to be "geometry as a physical science," or "how is space rooted in experience?" And its fundamental thesis is that the verifiable data of physical science extend temporally as well as spatially. All nature can, and indeed must, be analyzed into a complex of time-filling and space-filling events. It is therefore assumed that certain so-called "mathematical" objects, such as points of space

and instants of time, do not exist. Or rather, proof is advanced that we can get along without assuming that they exist, and can still have a mathematics applicable to nature. Professor Whitehead does not argue that points and instants are unperceivable and therefore unreal.

This book originally published 1919 has been reformatted for the Kindle and may contain an occasional imperfection from the original publication or from the reformatting.

### **From reader reviews:**

#### **Dan Maes:**

Hey guys, do you want to find a new book you just read? Maybe the book with the concept An Enquiry Concerning the Principles of Natural Knowledge (1919) suitable to you? Often the book was written by renowned writer in this era. Typically the book entitled An Enquiry Concerning the Principles of Natural Knowledge (1919) is one of several books which everyone reads now. This kind of book was inspired a number of people in the world. When you read this review you will enter the new way of measuring that you ever know ahead of. The author explained their strategy in the simple way, and so all of people can easily recognize the core of this book. This book will give you a wide range of information about this world now. To help you see the represented of the world in this book.

#### **William Boehme:**

The publication entitled An Enquiry Concerning the Principles of Natural Knowledge (1919) is the publication that recommended to you to read. You can see the quality of the guide content that will be shown to anyone. The language that writer use to explain their way of doing something is easily to understand. The writer did a lot of investigation when write the book, hence the information that they share to you personally is absolutely accurate. You also might get the e-book of An Enquiry Concerning the Principles of Natural Knowledge (1919) from the publisher to make you considerably more enjoy free time.

#### **Robert Stewart:**

In this era globalization it is important to someone to obtain information. The information will make anyone to understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of recommendations to get information example: internet, classifieds, book, and soon. You will see that now, a lot of publisher which print many kinds of book. The book that recommended to you personally is An Enquiry Concerning the Principles of Natural Knowledge (1919) this publication consist a lot of the information with the condition of this world now. This kind of book was represented so why is the world has grown up. The terminology styles that writer use to explain it is easy to understand. The writer made some investigation when he makes this book. Honestly, that is why this book suited all of you.

#### **Stella Keith:**

A number of people said that they feel bored stiff when they reading a e-book. They are directly felt the item when they get a half portions of the book. You can choose the particular book An Enquiry Concerning the Principles of Natural Knowledge (1919) to make your current reading is interesting. Your personal skill of reading skill is developing when you just like reading. Try to choose straightforward book to make you enjoy to learn it and mingle the opinion about book and looking at especially. It is to be initial opinion for you to like to wide open a book and read it. Beside that the book An Enquiry Concerning the Principles of Natural Knowledge (1919) can to be your brand new friend when you're truly feel alone and confuse with the

information must you're doing of these time.
